

PLOUTON AI

SQA TEST REPORT

Aerox ERP × Plouton AI

Prepared By	Emaan Nawaz
Role	Software Quality Assurance Analyst
Report Type	UI / UX / Content Consistency & Bug Report
Application Tested	Aerox ERP × Plouton AI — Proposal Landing Page (Live, Vercel)
Reference Documents	Client Research Document, Finance & Company Research Report, Finance Data Sheet
Date	July 27, 2026

1. Introduction & Scope

This report documents a software quality assurance pass on the live Aerox ERP × Plouton AI proposal web application, currently deployed on Vercel. Because a formal requirements or QA specification document was not provided for this project, this review instead cross-checks the live application against the two supporting documents that were provided: the Client Research Document and the Finance & Company Research Report, along with the standalone finance data sheet.

The scope of this review covers: content and messaging consistency between the live application and the reference documents, visual design consistency (color usage, alignment, spacing, typography) across the pages captured, spelling and grammar accuracy across both the application and the two supporting documents, and functional spot-checks of key interactive elements.

2. Documents Reviewed

Main Document	Client Research Document Aerox ERP, Custom Proposal Program, Team Beta
Research Document	Plouton AI Finance & Company Research Report
Finance Document	Plouton AI Finance Data Sheet (revenue, income statement, cash flow, ratios)
Live Application	Aerox ERP × Plouton AI proposal landing page, hosted on Vercel

3. Testing Methodology

- Read through the Client Research Document and Finance & Company Research Report to establish the intended messaging, five proposed capabilities, and financial figures.
- Reviewed the live application page by page: Hero, Problems, Solutions, Control Center, and Impact sections, including all interactive demo modals.
- Cross-checked wording, structure, and figures shown on the live application against the two supporting documents.
- Checked color usage, spacing, and alignment for consistency across sections and pages.
- Proofread all visible text on the live application and both supporting documents for spelling and grammar.
- Spot-checked key interactive elements (navigation, primary CTA button, contact/schedule flow) confirmed functional and working as intended in this pass.

4. Summary of Findings

Overall, the live application closely mirrors the intent of the Client Research Document and Finance & Company Research Report the five proposed capabilities, the three core workflows, the risk areas, and the closing value proposition all map cleanly onto what is shown on the site. The issues found below are content-polish and copy-level issues rather than structural or functional breaks.

Severity	Count	Examples
Medium	4	Garbled text, branding mismatch, dev artifacts in demo
Low	5	Spelling, grammar, formatting inconsistencies
High	0	None found in this pass

5. Functional Spot Checks Passed

The following interactive elements were checked and confirmed to be working correctly:

- Primary "Lets Discuss" CTA button functions correctly (label spelling issue logged separately, see BUG-01)
- Top navigation Problems, Solutions, Control Center, Impact all navigate correctly
- "Contact Aerox ERP Team" footer link working
- "Schedule a Discussion" flow working

6. Cross-Document Consistency Review

Points where the live application aligns well with the Client Research Document and Finance & Company Research Report:

- The five capability cards on the live site (Self-Healing Agents, Exception Intelligence, Smart Document Understanding, Natural-Language Audit Assistant, Agent Performance Analytics) match exactly the five "AI and Automation Opportunities" listed in Section 5a of the Client Research Document.
- The site's claim that "Two directions already have working proofs of concept" is accurate — exactly two cards are tagged POC (Self-Healing Agents, Natural-Language Audit Assistant) and three are tagged ARCH.
- The Hero section's Agent Monitor panel (Invoice Extraction, Bank Reconciliation, Month-End Close, AP Payment Run) maps directly onto the "three core workflows: accounts payable, bank reconciliation, and month-end financial close" named in the Client Research Document.
- The Risk Severity chart's five categories align with the five pain points in Section 2 of the Client Research Document. Credential & Session Security scores highest (90), matching the document's statement that this is "one of the most business-critical parts of the entire product, not a secondary concern."
- The Business Impact section's bar chart and five impact cards (Reliability, Operational Efficiency, Auditability, Enterprise Control, Scalability) closely mirror the Client Research Document's closing "Summary for Proposal Team" paragraph.
- All financial figures (Revenue Plan, Income Statement, Revenue Growth, Profit Margins, Cash Flow, Financial Ratios) match exactly between the finance data sheet and the Finance & Company Research Report no numeric discrepancies found.

Minor documentation inconsistency (informational, not a site bug):

- Founder names are formatted differently across the two supporting documents the Client Research Document uses "Sarfraz S. Hussain and Furqan Kidwai," while the Finance & Company Research Report uses full legal names, "Muhammad Furqan Karim Kidwai, Sarfraz Shahid Hussain." Same two people, inconsistent formatting between documents prepared for the same client.

7. UI / UX Design Consistency Review

Design elements checked across all captured pages:

- Header dark navy background with the Aerox ERP × Plouton AI logo lockup stays identical across every page.
- Section backgrounds consistently alternate between white and a light blue tone across Problems, Solutions, Control Center, and Impact.
- Primary CTA buttons use one consistent blue fill color throughout; secondary buttons consistently use an outlined style this pairing repeats correctly in both the Hero and the closing CTA section.

- "View Architecture >" is used consistently for ARCH-tagged cards, and "Open Demo >" is used consistently for POC-tagged cards.
- Card and modal styling (white background, grey supporting text, rounded corners) is consistent across all five capability cards and their modals.

Issues found are logged in the Bug Log below (BUG-02 through BUG-07 relate to UI/UX or on-page content).

8. Detailed Bug Log

Each entry below lists exactly where the issue is, what is wrong, why it qualifies as a bug against the supporting documents (or against internal consistency), and the recommended fix.

ID	Issue	Severity
BUG-01	Missing apostrophe in global CTA button ("Lets Discuss")	Low
BUG-02	Garbled placeholder text under "Real-Time NLP Audit Stream"	Medium
BUG-03	Garbled label "AUTO-RREADCO" in Self-Healing demo panel	Medium
BUG-04	Branding mismatch inside the Control Center mock-up	Medium
BUG-05	Mismatched stat caption in dashboard mock-up	Low
BUG-06	Singular/plural mismatch in Self-Healing Agents demo output	Low
BUG-07	Raw CSS class names exposed in a client-facing demo	Medium
BUG-08	Spelling error "Opreating" in the finance document	Low
BUG-09	Inconsistent currency-symbol formatting within one table	Low

1. Missing apostrophe in global CTA button ("Lets Discuss")

Bug ID	BUG-01 Severity: Low
Location	Global header, every page (Hero, Problems, Solutions, Control Center, Impact)
Issue Observed	The primary call-to-action button in the top navigation reads "Lets Discuss" instead of "Let's Discuss." The missing apostrophe appears on every screen since the header is shared sitewide.
Why It's a Bug / Reference	Standard English grammar. This is a shared global component, so the same spelling error repeats across the entire proposal, which reduces the polished, enterprise-grade impression the proposal is trying to create for a compliance-focused finance buyer.
Recommended Fix	Correct the button label to "Let's Discuss" in the shared header component so the fix applies across all pages at once.

2. Garbled placeholder text under "Real-Time NLP Audit Stream"

Bug ID	BUG-02 Severity: Medium
Location	Control Center section, dashboard mock-up, "REAL-TIME NLP AUDIT STREAM" panel subtitle
Issue Observed	The subtitle text reads "Continuus soreling log opttional logs nontered by NLP," which is not readable English. It looks like broken or leftover placeholder copy.
Why It's a Bug / Reference	The Client Research Document (Section 5a) lists a Natural-Language Audit Assistant and continuous auditability as flagship differentiators, and the Finance & Company Research

	Report (Section 3.1) describes "Auditability & control" as one of four core product pillars. This exact panel exists to demonstrate that pillar, so broken text directly undercuts the section meant to build trust.
Recommended Fix	Replace with clear copy, for example: "Continuous activity log monitored by NLP."

3. Garbled label "AUTO-RREADCO" in Self-Healing demo panel

Bug ID	BUG-03 Severity: Medium
Location	Control Center section, "SELF-HEALING AGENT WORKFLOW (POC DEMO)" panel, right-hand card header
Issue Observed	The panel header reads "AEROX RUNTIME FIX (AUTO-RREADCO)" — "AUTO-RREADCO" is not a recognizable word and appears to be a typo or corrupted label.
Why It's a Bug / Reference	Client Research Document Section 5a names "Self-healing agent monitoring" as the top AI opportunity, and this panel is the visual proof of that exact concept. A garbled label in the proof section weakens the credibility of the strongest pitch point.
Recommended Fix	Correct the label to the intended word, for example "AUTO-RESOLVED" or "AUTO-READY."

4. Branding mismatch inside the Control Center mock-up

Bug ID	BUG-04 Severity: Medium
Location	Control Center section, dashboard mock-up header/logo
Issue Observed	Inside the mock-up image, the header reads "A£E AEROX AI CENTRAL CONTROL HUB." Elsewhere on the live site, the same company is consistently branded "Aerox ERP" and this section is titled "Control Center" in the navigation bar. There is also a broken character ("A£E") before "AEROX AI" that looks like a rendering glitch.
Why It's a Bug / Reference	Compare against the global navigation bar, present on every page, which reads "Aerox ERP" next to the Plouton AI logo, and the nav menu item "Control Center." The naming inside this one image does not match the rest of the site.
Recommended Fix	Rename the mock-up header to "Aerox ERP" and "Control Center" to match the rest of the site, and fix the broken character before the logo text.

5. Mismatched stat caption in dashboard mock-up

Bug ID	BUG-05 Severity: Low
Location	Control Center section, dashboard mock-up, "ZERO-API HOURS SAVED TODAY" stat card
Issue Observed	The stat value "310 hrs" is captioned "AI Employee" underneath it. That caption reads as if it was copied from the neighbouring "ACTIVE AI EMPLOYEES" card rather than describing hours saved.
Why It's a Bug / Reference	Internal consistency issue within the same panel the other two stat cards in the row have captions that correctly describe their own numbers ("Operating" and "Layout Updates").
Recommended Fix	Replace the caption with something relevant to hours saved, for example "This Week" or "Automated Today."

6. Singular/plural mismatch in Self-Healing Agents demo output

Bug ID	BUG-06 Severity: Low
Location	Solutions section, "Self-Healing Agents" modal, "Model Predictions & Change Detection Output" stat tiles
Issue Observed	All four tiles show a count of "1" but use plural labels: "1 UI Changes Detected," "1 Text/Binding Changes," "1 Attribute Changes," and "1 Verified Binding Candidates." A count of one needs a singular label.
Why It's a Bug / Reference	Basic grammar/number agreement visible directly in the demo modal screenshot with no external document needed to confirm it.
Recommended Fix	Use singular wording for a count of 1 ("1 UI Change Detected," etc.), or make the label pluralize dynamically based on the actual count.

7. Raw CSS class names exposed in a client-facing demo

Bug ID	BUG-07 Severity: Medium
Location	Solutions section, "Self-Healing Agents" modal, change-diff panel
Issue Observed	The diff shown to illustrate the self-healing concept exposes implementation-level CSS: "bg-amber-100 text-amber-700 px-2 py-0.5 rounded-full font-medium text-[10px] → bg-emerald-100 text-emerald-700 px-2 py-0.5 rounded-full font-medium text-[10px]." This is developer-facing styling code, not business-readable content.
Why It's a Bug / Reference	The Client Research Document (Section 2) and Finance & Company Research Report (Section 3.3) both describe the buyer as finance, RevOps, and compliance teams — not engineers. Raw class names are not meaningful to that audience and read as an unfinished/dev-debug artifact left in a client demo.
Recommended Fix	Replace the raw class-name diff with a plain-language description, for example "Status badge color and label updated automatically from Pending Review to Auto-Verified."

8. Spelling error "Opreating" in the finance document

Bug ID	BUG-08 Severity: Low
Location	Plouton AI finance Word document, "Estimated Cash Flow" table, first column header
Issue Observed	The column header reads "Opreating Cash Flow (\$)" — a misspelling of "Operating."
Why It's a Bug / Reference	Compare to the Finance & Company Research Report, Section 7.5, Table 6, which spells the same column correctly as "Operating CF." The two finance documents should match, and neither should contain a spelling error.
Recommended Fix	Correct the header to "Operating Cash Flow (\$)."

9. Inconsistent currency-symbol formatting within one table

Bug ID	BUG-09 Severity: Low
Location	Plouton AI finance Word document, "Estimated Cash Flow" table, all four column headers

Issue Observed	In the same table, header formatting is inconsistent: "Opreating Cash Flow (\$)" places the symbol in parentheses, while "Investing Cash Flow \$," "Financing Cash Flow \$," and "Net Cash Flow \$" place a bare dollar sign after the word with no parentheses. Four headers, three different styles.
Why It's a Bug / Reference	Contrast with the Finance & Company Research Report, Table 6, which uses one consistent header style ("Operating CF," "Investing CF," "Financing CF," "Net Cash Flow") across the same data set.
Recommended Fix	Standardize all four headers to a single consistent pattern, matching the cleaner convention already used in the Research Report.

9. Recommendations Summary

- Fix the "Lets Discuss" apostrophe once in the shared header component it will resolve the issue sitewide.
- Proofread and clean up the placeholder/garbled text inside the Control Center dashboard mock-up image before it is shown to Plouton AI, since this section is meant to be the strongest visual proof of the audit and self-healing pitch.
- Standardize the branding used inside embedded images ("Aerox ERP" / "Control Center") to match the live navigation bar.
- Replace the raw CSS class-name diff in the Self-Healing Agents demo with plain-language change descriptions suited to a finance audience.
- Fix the singular/plural labels in the change-detection stat tiles.
- Correct the spelling and formatting inconsistencies in the finance data sheet so it matches the cleaner formatting already used in the Finance & Company Research Report.

10. Conclusion

The live Aerox ERP × Plouton AI proposal application is structurally sound, functionally working across the elements tested, and closely aligned with the messaging and figures in both supporting documents. The issues identified in this pass are copy-level and cosmetic none of them are functional breaks and are concentrated in the Control Center mock-up and the Self-Healing Agents demo modal, along with a small number of spelling and formatting issues in the finance data sheet. Addressing the nine items above would bring the proposal to a fully polished, client-ready state.
