

TEAM BETA: D-divine , P- passion, S-skill

PLUTON AI — CLIENT PITCH LANDING PAGE

UI, Frontend, Research & Finance Execution Guide

Project: Plouton AI Client Proposal

Team: Aerox ERP Special Project Force

Objective: Build a high-impact, enterprise-grade proposal landing page that demonstrates how Aerox ERP can strengthen Plouton AI's existing AI-agent platform.

1. LOCKED LANDING PAGE STRUCTURE

The landing page will contain exactly these 8 primary sections:

1. Header
2. Hero
3. Problems — High-Impact Figures
4. Solutions
5. Control Center — Static Dashboard Mockup
6. Business Impact / How Aerox ERP Helps
- 7. CTA**
8. Footer

Important Rule

- Do not add unnecessary sections.
 - Do not overload the page with paragraphs.
 - Every section must communicate its purpose within a few seconds.
 - Content must be minimal, visual, and enterprise-focused.
 - All statistics and factual claims must be validated before implementation.
-

PART A — UI/UX DESIGNER BY: SALEHA

Overall UI Objective

Design a premium enterprise AI/SaaS experience.

The design should communicate:

- Enterprise-grade technology
- AI automation
- Financial operations
- Security
- Trust
- Reliability
- Technical sophistication
- Modern B2B SaaS

Avoid:

- Gaming-style visuals
- Excessive gradients
- Excessive animations
- Cartoon illustrations
- Too many colors
- Huge paragraphs
- Unnecessary decorative elements

2. DESIGN SYSTEM

Before designing individual sections, establish the complete design system.

Color Theme

Use a professional enterprise technology palette.

Recommended direction:

- Deep navy / near-black → primary background
- White / off-white → primary text
- Cool blue → primary technology accent
- Electric cyan → AI/automation accent
- Soft gray → secondary text
- Green → success / healthy agent status

- Amber → warning / exceptions
- Red → failure / critical alert

Important

Do not use every color everywhere.

Use colors according to meaning:

- Blue/Cyan → AI and technology
 - Green → Success
 - Amber → Exception/Warning
 - Red → Failure/Risk
 - White → Primary information
-

3. TYPOGRAPHY

Use modern enterprise SaaS typography.

Recommended:

- Inter
- Manrope
- Geist
- Plus Jakarta Sans

Typography hierarchy:

- Large bold heading → Hero
- Medium bold headings → Section titles
- Regular text → Supporting information
- Small uppercase labels → Tags / categories / status
- Large numerical typography → Business metrics

Maintain:

- Consistent font weights
 - Strong visual hierarchy
 - Short lines
 - Generous spacing
-

4. COMPONENT SYSTEM

Create reusable components for:

- Navbar
- Buttons
- Section headings
- Cards
- Metric cards
- Status badges
- Tabs
- Tooltips
- Modals
- Charts
- Dashboard widgets
- Architecture diagrams
- CTA blocks
- Footer links

All components should follow one consistent:

- Border radius
- Spacing system
- Typography
- Icon style
- Shadow system
- Button style

5. UI SECTION-BY-SECTION DESIGN

SECTION 1 — HEADER

Purpose

Create immediate brand identity and navigation.

Include

- Aerox ERP logo
- "x"
- Plouton AI logo/name

- Navigation:
 - o Problems
 - o Solutions
 - o Control Center
 - o Impact
- Primary CTA:
 - o Let's Discuss
- Optional secondary action:
 - o Explore Solutions

Design Direction

Keep the header:

- Minimal
- Sticky
- Clean
- Professional
- Slightly transparent/glass effect if it fits the theme

Interaction

Navigation links should scroll to the corresponding sections.

6. SECTION 2 — HERO

Purpose

The hero must immediately answer:

Who is Plouton?

What problem exists?

What is Aerox proposing?

Layout

Two-column layout:

Left:

Small badge:

Aerox ERP × Plouton AI

Main headline:

Strengthening AI-Powered Finance Operations

Supporting copy:

One or two concise sentences explaining that Aerox ERP proposes improving agent resilience, exception intelligence, auditability, and enterprise control.

Buttons:

- Explore Solutions
- View Control Center

Right:

Create a sophisticated AI/finance interface visual.

Possible visual:

- Agent activity
- Financial workflow
- ERP interface representation
- AI processing
- Audit trail
- Live status indicators

Important

Do NOT put a huge paragraph in the hero.

The visitor should understand the pitch within seconds.

7. SECTION 3 — PROBLEMS WITH HIGH-IMPACT FIGURES

Purpose

Show that Plouton already has a strong product, but there are specific areas where the system can become more resilient and enterprise-ready.

Problems to represent

Use the validated research content to represent:

- ERP interface changes
- Integration/adoption challenges
- Automation exceptions
- Trust/control requirements
- Credential/session security

Visual Style

Do NOT simply write five paragraphs.

Use:

Metric Cards

Example structure:

ERP Interface Drift

Interface changes can disrupt browser-based workflows.

Bar Charts / Visual Data

Use only validated numbers.

Possible visualization categories:

- Manual workflow effort
- Exception rates
- Processing delays
- Automation failure impact
- Audit effort

Important Rule

No invented numbers.

If exact data does not exist:

- Use qualitative visualization
- Use "Risk Area"
- Use "Operational Challenge"
- Or use client-provided data

Do not create fake percentages such as "70% reduction" unless properly supported.

8. SECTION 4 — SOLUTIONS

This is one of the most important sections.

Purpose

Show:

Problem → Aerox Solution → Technical Proof

Use five solution cards.

Cards

1. Self-Healing Agents
 2. Exception Intelligence
 3. Smart Document Understanding
 4. Natural-Language Audit Assistant
 5. Agent Performance Analytics
-

Card Interaction

The cards should NOT be merely decorative.

Make them interactive.

POC Cards

Two solutions have working POCs:

Self-Healing Agent

Clicking the card should open:

- Modal
- Embedded demo
- Interactive simulator

The visitor should be able to see the working POC.

Natural-Language Audit Assistant

Clicking the card should open:

- Chatbot modal
- Embedded chatbot
- Sample audit-log interaction

The visitor can ask a sample question and see the AI response.

Non-POC Solutions

The remaining three solutions should open an:

Architecture / Technical Flow View

For example:

Smart Document Understanding

Document

OCR / Document Processing

Information Extraction

Structured Data

Finance Workflow

Exception Intelligence

Transaction Data

Matching / Analysis

Anomaly Detection

Possible Cause

Human Review

Performance Analytics

Agent Runs

Metrics Collection

Analysis

Performance Dashboard

ROI Insights

Important

Do NOT pretend these three are fully working products.

Clearly present them as:

Proposed Architecture

or

Solution Concept

9. "HOW AEROX ERP WORKS" VISUAL

This can be incorporated inside the Solutions section.

Create a simple horizontal flow:

Plouton Agent Activity

↓

Data / Logs / Events

↓

Aerox Intelligence Layer

↓

AI Analysis

↓

Control & Human Review

↓

Enterprise Dashboard

This should visually explain how Aerox complements Plouton instead of replacing Plouton.

10. SECTION 5 — CONTROL CENTER STATIC DASHBOARD

Purpose

The dashboard is a visual representation of the proposed future control center.

It is NOT a fully functional production dashboard.

UI Designer must create a high-fidelity dashboard mockup.

Dashboard Header

Example:

Plouton Control Center

Status:

- All Systems Operational

Possible controls:

- Date range
- Workflow filter
- Agent filter

Dashboard Widgets

1. Agent Status

Show:

- Active Agents
- Running
- Completed
- Failed
- Requires Review

2. Workflow Overview

Show the three core workflows:

- Accounts Payable
- Bank Reconciliation
- Month-End Close

3. Exception Queue

Example columns:

Transaction	Workflow	Issue	Status
INV-1042	AP	Amount mismatch	Review
TX-2041	Reconciliation	FX difference	Review
CL-3021	Month-End	Missing entry	Open

Use sample/demo data only.

4. Audit Logs

Show:

- Timestamp
- Agent
- Action
- Workflow
- Status

Example:

10:31 — Agent-04 — Invoice extracted — Success

5. Replay Viewer

Create a visual placeholder representing:

Screen Recording / Agent Replay

Include:

- Play button
 - Timeline
 - Agent action markers
 - Timestamp
-

6. Performance Overview

Show visual metrics such as:

- Successful Runs
- Exceptions
- Failed Runs
- Average Processing Time

Use sample values clearly labelled as:

Demo Data

11. SECTION 6 — BUSINESS IMPACT

Purpose

Answer the client's most important question:

"How will this help our business?"

Use concise impact cards.

Impact Areas

1. Reliability

More resilient automation against interface changes.

2. Operational Efficiency

Less manual monitoring and exception handling.

3. Auditability

Better visibility into agent actions and historical runs.

4. Enterprise Control

Human checkpoints and role-based control over sensitive workflows.

5. Scalability

A structured control layer as workflows and ERP environments grow.

Numbers

Use large numbers only when verified.

Possible categories:

- Processing time
- Exception rate
- Successful runs
- Manual effort
- Time saved
- Number of workflows
- Number of supported systems

Critical Rule

Do not fabricate business outcomes.

If there is no verified number, use:

Improved visibility

rather than:

80% improvement

12. SECTION 7 — CTA

Purpose

Convert interest into a business conversation.

Heading

Example:

Ready to Strengthen Enterprise Finance Automation?

Supporting line

Short and professional.

Primary CTA

Schedule a Discussion

Secondary CTA

Explore the Solution

CTA Interaction

The primary CTA can:

- Open a meeting-request form
- Scroll to a contact form
- Open scheduling interface if available

The secondary CTA can:

- Scroll to Solutions
- Scroll to Control Center

Avoid unnecessary buttons.

13. SECTION 8 — FOOTER

Include:

- Aerox ERP
- Plouton AI
- Proposal / Partnership label
- Navigation links
- Privacy / Security if required
- Contact information if approved
- Copyright

Keep it minimal.

PART B — FRONTEND DEVELOPER BY: HUZAIFA ANWER AND HAMMAD

Overall Objective

Convert the approved Figma design into a responsive, polished React landing page.

Recommended Stack

- React.js / Next.js
- Tailwind CSS
- Framer Motion
- Lucide React
- Recharts or Chart.js
- Axios / Fetch
- Git + GitHub

(tech stack is upto you , above are some suggestions)

FRONTEND SECTION RESPONSIBILITIES

Header

Implement:

- Sticky navigation
- Smooth scrolling
- Mobile navigation
- CTA buttons

Hero

Implement:

- Responsive two-column layout
- Animated interface visual
- CTA interactions
- Subtle entrance animations

Avoid excessive animation.

Problems

Implement:

- Metric cards
- Bar charts
- Data visualization
- Responsive layout

Charts must consume validated data supplied by Research/Finance.

Solutions

Build reusable solution cards.

Required interaction

Self-Healing Agent:

Card → Click → POC Modal

Natural-Language Audit Assistant:

Card → Click → Chatbot POC

Other three:

Card → Click → Architecture Diagram Modal

Control Center

Implement the static dashboard mockup as a real frontend interface.

Include:

- Agent status
- Workflow cards
- Exception queue
- Audit logs
- Replay viewer
- Performance metrics

Use mock/demo data unless backend integration is available.

Business Impact

Implement:

- Metric cards

- Charts where required
 - Animated counters only for validated numbers
-

CTA

Implement:

- Primary button
 - Secondary button
 - Modal/form if required
 - Validation
-

Footer

Implement:

- Navigation
 - Links
 - Responsive layout
-

FRONTEND INTEGRATION

Frontend should be prepared to consume:

Backend APIs

For example:

GET /api/audit-logs

GET /api/agent-status

GET /api/exceptions

POST /api/contact

AI Services

Frontend can communicate with AI POCs through:

Frontend

↓

API Request

↓

Backend / AI Service

Response

Frontend UI

IMPORTANT FRONTEND RULE

Do not hard-code every piece of dynamic information directly into components.

Separate:

- UI
- Data
- API calls
- Configuration

This makes the proposal easier to demonstrate and maintain.

PART C — RESEARCH SPECIALIST

Overall Objective

The Research Specialist is responsible for factual accuracy and content validation.

You are NOT responsible for writing long paragraphs.

Your job is to ensure that everything shown on the landing page is:

- Accurate
- Relevant
- Concise
- Properly sourced
- Consistent with the client document

PART C: RESEARCH DELIVERABLE BY HUMA

Create:

research/landing-page-content-validation.md

SECTION-WISE RESEARCH REQUIREMENTS

Header

Validate:

- Correct company names
 - Correct branding
 - Correct partnership terminology
-

Hero

Provide:

- One concise company positioning statement
- One concise problem statement
- One concise value proposition

Avoid long descriptions.

Problems

For each problem provide:

- Problem title
- 1-sentence explanation
- Source
- Whether numerical evidence exists

Example format:

Problem: Browser Interface Fragility

Explanation: Browser-based automation can be affected by changes in third-party interfaces.

Source: Client document / verified source

Metric Available: Yes / No

Solutions

Validate that every proposed solution is actually connected to a documented problem.

Create a mapping:

Problem	Proposed Solution
Interface Changes	Self-Healing Agents
Transaction Exceptions	Exception Intelligence
Unstructured Documents	Smart Document Understanding
Auditability	Natural-Language Audit Assistant
ROI Visibility	Performance Analytics

Dashboard

Validate:

- Plouton's three core workflows
- Existing auditability features
- Existing screen-recording/logging claims
- SOC 2 Type II claim

Do not present proposed dashboard functionality as if it already exists.

Clearly distinguish:

Existing Plouton Capability

vs.

Proposed Aerox Enhancement

Business Impact

Research must identify:

- Verified business benefits
- Verified metrics
- Relevant enterprise outcomes

If no reliable number exists:

Do not invent one.

Instead provide qualitative statements.

CTA

Validate:

- Company names
- Partnership language

- Contact terminology

RESEARCH FINAL OUTPUT

The document must contain:

- Section-wise final copy
- Verified facts
- Sources
- Claims requiring client confirmation
- Numbers that are safe to display
- Numbers that must NOT be used

PART D — FINANCE / BUSINESS ANALYST BY: ALI MUHAMMAD

Overall Objective

The Finance/Business Analyst is responsible for identifying all numerical and business-impact information that can be safely visualized on the landing page.

The Finance member should NOT invent financial numbers.

The job is to extract, validate, calculate where justified, and clearly label demo data.

FINANCE DELIVERABLE

Create:

research/financial-impact-report.md

and, if needed:

research/validated-metrics.json

SECTION-WISE FINANCE REQUIREMENTS

Problems Section

Identify possible measurable dimensions such as:

- Manual processing effort
- Reconciliation workload
- Exception volume

- Integration time/cost
- Automation failures
- Audit effort
- Operational risk

For each metric provide:

- Metric name
- Value
- Unit
- Source
- Whether it is verified
- Recommended visualization

Recommended Visualization Mapping

Metric Card

Use when there is one important number.

Example:

24/7

Continuous Agent Operation

Only use if this is supported by the source/client context.

Bar Chart

Use when comparing categories.

Example:

Manual Processing

vs.

Automated Processing

Only if actual comparative data exists.

Donut / Progress Chart

Use for:

- Success vs. Exception
- Completed vs. Failed

- Workflow distribution

Only when the dataset is real or clearly marked as demo data.

Dashboard Metrics

Prepare safe demo values for:

- Successful runs
- Exceptions
- Failed runs
- Processing time
- Workflow volume

These must be labelled:

Illustrative Demo Data

unless they come from actual Plouton data.

Business Impact Section

Identify measurable business outcomes that could potentially be shown.

Possible categories:

Efficiency

- Time saved
- Reduced manual intervention

Reliability

- Successful workflow execution
- Reduced automation failures

Auditability

- Traceable agent actions
- Replayable runs

Security

- Controlled access
- Session isolation
- Credential protection

Scalability

- Workflows supported

- ERP environments supported

FINANCE REPORT FORMAT

For every number, use:

Metric:

Value:

Unit:

Source:

Verified: Yes / No

Recommended Section:

Recommended Visualization:

Can Be Used Publicly: Yes / No

IMPORTANT RULE — DEMO DATA

If the team creates numbers for the static dashboard or POC:

Example:

82 Successful Runs

12 Exceptions

6 Failed

These are not Plouton business results.

They must be labelled:

Demo Data

or:

Illustrative Data

Never present sample numbers as client performance.

FINAL COLLABORATION FLOW

The four teams should work in parallel.

STEP 1 — Research

Research Specialist:

Client Document

Extract facts

Validate claims

Prepare section-wise content

STEP 2 — Finance

Finance Specialist:

Validated Research + Client Data

Identify metrics

Validate numbers

Recommend visualizations

STEP 3 — UI Designer

UI Designer receives:

Research Content

-

Finance Metrics

Designs:

- Sections
 - Cards
 - Charts
 - Dashboard
 - POC interaction states
 - Architecture diagrams
-

STEP 4 — Frontend

Frontend receives:

Figma Design

-

Validated Content

-

Metrics

↓

Builds:

React Landing Page

FINAL FRONTEND EXPERIENCE

The final user journey should look like:

Header

↓

Hero

↓

Problems + Visual Data

↓

Solutions

↓

Click Self-Healing Agent

→ Working POC

↓

Click NLP Audit Assistant

→ Working POC

↓

Click other solutions

→ Architecture Diagram

↓

Control Center

→ Static Dashboard Experience

Business Impact

CTA

Footer

FINAL GITHUB DELIVERABLES

UI Designer

design/

- Figma link
- Design system
- High-fidelity desktop design
- Mobile design
- Dashboard mockup
- Architecture diagrams
- SVGs / icons / assets

Frontend Developer

frontend/

- React/Next.js application
 - Responsive implementation
 - Components
 - Charts
 - Animations
 - POC modal containers
 - Dashboard
 - API integration layer
 - README
-

Research Specialist

research/

- landing-page-content-validation.md
 - sources.md
 - verified-claims.md
 - section-copy.md
-

Finance / Business Analyst

research/

- financial-impact-report.md
 - validated-metrics.json
 - Visualization recommendations
 - Demo-data declaration
-

FINAL QUALITY RULES

Before final submission:

Content

- No unsupported claims
- No fake statistics
- No unnecessary paragraphs
- Existing Plouton capabilities clearly separated from proposed Aerox enhancements

UI

- Enterprise visual language
- Consistent typography
- Consistent spacing
- Consistent cards
- Strong visual hierarchy

Frontend

- Responsive
- Fast

- No broken links
- No console errors
- Smooth interactions

Data

- Every displayed number has a source
- Demo data is clearly labelled
- No fabricated ROI claims

Presentation

The landing page must communicate one clear message:

Plouton already has a differentiated AI-agent foundation. Aerox ERP proposes strengthening its resilience, intelligence, visibility, security, and enterprise control.

FINAL TEAM OUTPUT

The final product is not simply a website with attractive cards.

It should demonstrate three things:

1. We understand Plouton's existing product.
2. We understand its technical and business challenges.
3. We have a technically credible, visually demonstrable approach to strengthening it.

TIME DURATION: 6 HOURS

SUBMIT ME ON TIME , OTHERWISE IT EFFECTS YOUR KPI

Your performance will judge based on above requirements accomplishment in your work

BEST OF LUCK !!

Written By: Izma Warsia (Lead and Reporting Manager)
